Sustainable Development Goals

CHITKARA UNIVERSITY
HIMACHAL PRADESH
NAAC A+ ACCREDITED

1. Industry, Innovation, and Infrastructure (SDG 9)

- Introduces digital transformation in traditional tailoring industry
- Builds an online service infrastructure
- Encourages innovation in local business models
- Connects customers and service providers through technology

2. Sustainable Cities and Communities(SDG11)

- Supports local businesses within communities
- Reduces unnecessary travel through online booking
- Promotes organized service systems in cities and towns
- Strengthens community-based services

Introduction

In many regions, especially smaller cities and towns, customers face difficulty in finding skilled tailors and booking appointments at convenient times. Traditional tailoring services rely on walk-in visits or manual scheduling, leading to long waiting times and inefficient service management.

Our project aims to solve this problem by developing a digital platform (BookMyTailor) that allows users to easily find tailors, book appointments, and customize clothing services online. This system improves accessibility, saves time, and enhances the overall customer experience while supporting local tailoring businesses.It promotes smart service solutions, better time management, and strengthens the connection between customers and tailoring professionals.

Key Features :

- **Easy Appointment Booking**
- **Tailor Discovery Platform**
- **User-Friendly Interface**
- **Customization & Order Management**
- **Time-Saving and Efficient**
- **Scalable System**

Problem Statement & Need Statement

CHITKARA UNIVERSITY
HIMACHAL PRADESH
NAAC A+ ACCREDITED

Problem Statement:

Traditional tailoring services often rely on walk-in visits and manual appointment scheduling, leading to long waiting times, poor time management, and lack of convenience for customers. Many people find it difficult to locate skilled tailors nearby or check their availability in advance.

Additionally, there is no centralized platform that connects customers with tailors, which limits business opportunities for local tailors, especially in small towns and low-resource areas. This results in inefficient service delivery and reduced customer satisfaction.

Need Statement:

This solution aims to simplify the process of finding and booking tailoring services through a digital platform. It will improve accessibility for customers, save time, and provide a more organized system for managing appointments and orders.

BookMyTailor will support local tailoring businesses by giving them an online presence, increasing their reach and income opportunities. It will also promote efficient service management, reduce delays, and enhance customer experience.

Overall, the system will create a more convenient, scalable, and sustainable solution for both customers and tailoring professionals.

Web Design

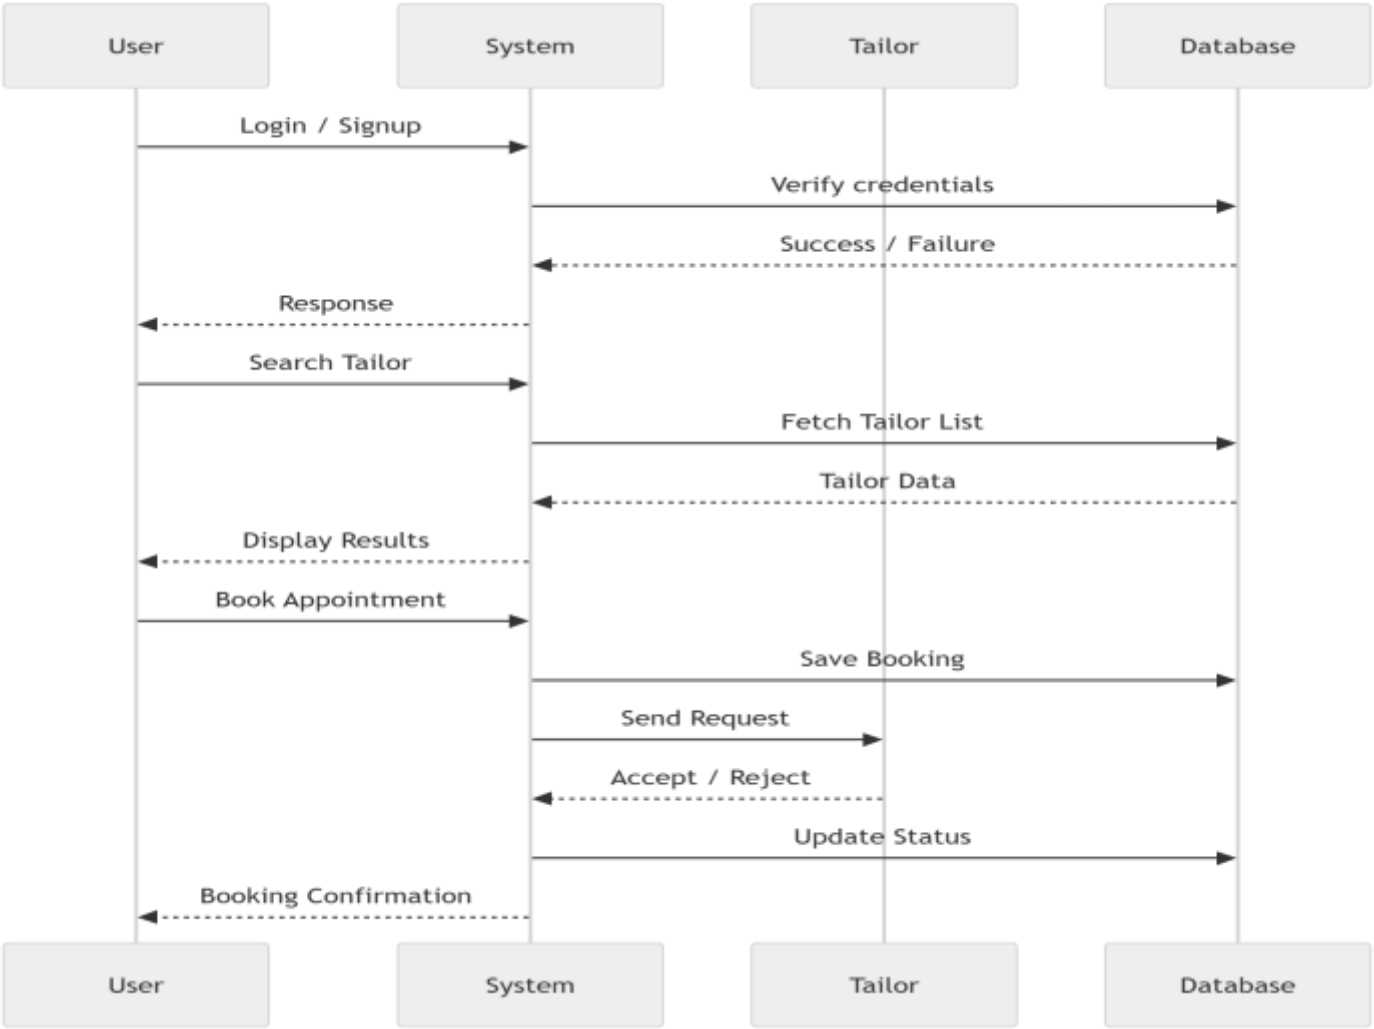
Sequence Diagram



Technology Stack

1. Frontend Technologies

React.js

- A JavaScript library used for building the user interface.
- Provides a component-based architecture for reusable UI elements.
- Ensures fast rendering using the virtual DOM.
- Manages state efficiently with React Hooks (useState, useEffect).

Tailwind CSS

- A utility-first CSS framework for rapid UI development.
- Offers a highly customizable and responsive design without writing extensive CSS.
- Ensures a modern and visually appealing user interface.

2. Backend Technologies

Node.js

- A runtime environment that enables server-side execution of JavaScript.
- Handles multiple simultaneous requests efficiently using an asynchronous, non-blocking architecture.
- Facilitates seamless integration between the frontend and backend using a single language (JavaScript).

Technology Stack

Express.js

- A lightweight web framework for Node.js used to build RESTful APIs.
- Simplifies backend development by providing robust routing and middleware support.
- Ensures secure data handling and authentication processes.

3. Database Management

MongoDB

- A NoSQL database that stores data in a flexible JSON-like format.
- Provides high scalability and performance for handling large volumes of healthcare data.
- Uses collections to manage users, doctors, appointments, and payments efficiently.

Conclusion

The development of **BookMyTailor** aims to transform the way customers interact with tailoring services by providing an efficient and user-friendly digital platform. By leveraging modern web technologies like React.js, Tailwind CSS, Node.js, Express.js, and MongoDB, the system ensures a smooth, secure, and scalable experience. It enables users to easily find tailors, book appointments, and manage their customization needs in one place.

In conclusion, BookMyTailor successfully combines modern technologies to deliver a practical and accessible solution for both customers and tailoring professionals. With a focus on convenience, efficiency, and scalability, this project opens the door for future enhancements such as online payments, real-time tracking, and personalized recommendations, making it a valuable innovation in the field of digital service platforms.

Future Scope

- **Doorstep tailor service** – Enable tailors to visit customers at home for measurements and fittings
- **Live tracking** – Track tailor location in real time during home visits Online
- **payment integration** – Support secure payments through UPI, cards, and wallets
- **Rating and review system** – Allow users to rate and review tailors
- **Mobile application** – Develop Android and iOS apps for better accessibility
- **Notifications and alerts** – Provide booking confirmations, reminders, and updates
- **AI-based recommendations** – Suggest designs and tailors based on user preferences
- **Multi-city expansion** – Scale the platform to multiple locations

Thank You
