PROJECT REPORT OF INDUSTRY ORIENTED HANDS ON EXPERIENCE (IOHE)

ON

BookMyTailor

submitted in partial fulfilment of the requirements for the award of degree of

BACHELOR OF ENGINEERING

In

COMPUTER SCIENCE AND ENGINEERING

Submitted by:

Suhani, Akshita Minhas , Saneha Bhatia

(2211985050,2211985004,2211985044)

Supervised By:

Dr. Rajat Takkar

Assistant Professor

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

CHITKARA UNIVERSITY INSTITUTE OF ENGINEERING AND TECHNOLOGY CHITKARA UNIVERSITY, PUNJAB, INDIA

DECLARATION

I hereby certify that the work which is being presented in the project report entitled **"BookMYTailor"** in partial fulfilment of requirement for the award of the degree of Bachelor of Engineering (Computer Science and Engineering) submitted in the department of Computer Science and Engineering at Chitkara University Institute of Engineering and Technology, Chitkara University, Punjab, India, is an authentic record of my own work carried out under the supervision of **Dr. Rajat Takkar**. The matter presented in this project report has not been submitted in any other university/institute for the award of any degree.

Place: Rajpura Suhani, Akshita Minhas, Saneha Bhatia

Date: 29-04-2026 (2211985050,2211985004,2211985044)

This is to certify that the above statement made by the candidate is correct to the best of my knowledge and belief.

Dr. Rajat Takkar

Assistant Professor

Department of Computer Science and Engineering

Chitkara University Institute of Engineering and Technology,

Chitkara University, Punjab, India

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my respected mentor, Dr. Rajat Takkar Sir, for his invaluable guidance, continuous support, and encouragement throughout the development of my project, Resume Builder. His expertise, constructive feedback, and motivation helped me overcome challenges and improve the quality of my work at every stage.

I am deeply thankful to Chitkara University for providing me with the opportunity, infrastructure, and learning environment that enabled me to successfully complete this project. The resources and academic support offered by the university played a significant role in enhancing my technical and practical knowledge.

I would also like to extend my heartfelt thanks to all my faculty members for their guidance and for sharing their knowledge, which contributed to the successful completion of this project.

I sincerely appreciate my friends and peers for their cooperation, valuable suggestions, and constant support during the project development process. Their encouragement and teamwork made this journey more productive and enjoyable.

I would like to acknowledge the contribution of various online resources, documentation, and tools that assisted me in learning new concepts and implementing them effectively in this project.

Finally, I express my deepest gratitude to my family for their unconditional support, patience, and motivation. Their belief in me has always inspired me to give my best and complete this project successfully.

This project has been a great learning experience, and I am thankful to everyone who directly or indirectly contributed to its completion.

1. Introduction

In many cities and towns, customers often face difficulty in finding skilled tailors and booking appointments at suitable times. Traditional tailoring services usually depend on direct visits or manual appointment methods, which can result in long waiting times and poor schedule management. Customers often struggle to know a tailor's availability in advance, and appointments are not always organized efficiently. This lack of a structured booking system creates inconvenience for both customers and tailoring professionals. Therefore, there is a need for a simple and organized digital platform that can streamline the appointment process and improve overall coordination.

The main objective of BookMyTailor is to develop a web-based platform that connects customers with tailors and allows easy appointment scheduling. The project aims to simplify the process of finding tailors, checking their availability, and managing bookings in an efficient and user-friendly manner.

BookMyTailor is designed as an online appointment management system that bridges the gap between customers and tailoring professionals. The platform enables users tocreate accounts, view tailor profiles, and book appointments according to their preferred date and time. Tailors can update their availability and manage their appointment schedules through the system. The major components of the system include user registration, tailor profile management, appointment scheduling, and booking tracking. These components work together to ensure smooth coordination and organized management of appointments.

Key features of the system include secure login, profile creation for both customers and tailors, appointment booking, schedule management, and booking history tracking. The platform is designed with a simple and easy-to-use interface to ensure accessibility and convenience for all users.

The project is developed using modern web technologies for frontend and backend development along with a database system to store user and booking information.

The expected outcome of BookMyTailor is an efficient and reliable platform that reduces waiting time, improves convenience, and enhances the overall tailoring appointment experience. This project offers a structured digital approach to modernizing traditional tailoring appointment management.

2. Methodology

1. Requirement Analysis

- user registration, profile management, appointment booking are gathered and analyzed to define system functionality.

2. System Design

- the overall architecture of the system is planned. The platform is designed as a web-based application with a client-server model. The frontend interface is designed for ease of use, while the backend handles business logic and database operations.

3. Development

- The system is implemented using modern web technologies. The frontend is developed using React.js to create an interactive user interface. The backend is built using Node.js and Express.js to handle server-side operations. MongoDB is used as the database to store and manage data

5. Integration

- Frontend and backend components are integrated to ensure smooth communication between the user interface and the server.

6. Testing

- The system undergoes various testing methods such as functional testing and usability testing to identify and fix errors. This ensures that all features work correctly and provide a smooth user experience.

3. Technologies

The project is developed using modern web technologies such as React.js for frontend development, Node.js and Express.js for backend development, and MongoDB for database management.

4. Implementation

The implementation of BookMyTailor is carried out using a full-stack web development approach. The frontend is developed using React.js to create a responsive and user-friendly interface for registration, login, and appointment booking. The backend is built with Node.js and Express.js, which handle server-side logic , tailor profiles, and bookings. MongoDB is used as the database to store all application data efficiently. Secure authentication is implemented using encrypted passwords and token-based login systems. The frontend and backend are integrated to ensure smooth data flow, and the system is tested and deployed to provide a reliable and accessible online platform for users.

5. Results

The expected outcome of BookMyTailor is a streamlined appointment booking system that reduces waiting time and improves accessibility to tailoring services. It enhances convenience for customers while allowing tailors to organize their schedules more effectively.

.

6. Conclusion

The **BookMyTailor** project successfully provides a digital solution to simplify and organize the process of booking tailoring appointments. By integrating modern web technologies, the system bridges the gap between customers and tailors, making it easier to find services, check availability, and manage bookings efficiently. The platform improves time management, reduces waiting periods, and enhances user convenience through a simple and user-friendly interface. Overall, this project demonstrates how traditional services can be improved through digital transformation, offering a reliable and scalable solution for better appointment management.

7. Future Scope

- Online payment integration
- Real-time notifications (SMS/Email)
- Rating and review system.
- Mobile application development.
- Chat system between customer and tailor
- Multi-language support
- Expansion to other service providers
